

If you have a fire can your family get out safely?

When your smoke alarms go off, will everyone know how to escape? Don't leave it to chance!

1. Help your children recognize the sound of smoke alarms
2. Sit down with them to draw an Escape Plan
3. Know TWO WAYS OUT from each room if possible
4. Agree on an outside meeting place
5. Once out, stay out and call 9-1-1

PRACTISE OFTEN

Escape ladders

A two-storey home should have one per bedroom located on upper floor(s). Your best choice to ensure there is a second escape route via window if stairway is blocked by fire.

People lose their lives needlessly every year because they have not installed smoke alarms, or, they have removed the batteries or taken them down from the ceiling.

DON'T LET THIS HAPPEN TO YOU!

Keep your family protected by having smoke alarms installed on every level and outside all sleeping areas. Also, make sure they have fresh batteries and are under 10 years old.

And if you have sources of carbon monoxide in your home, also install CSA-approved CO alarms outside all sleeping areas for maximum protection.

They too need to be replaced every 7-10 years.
